

# **RAD TERMINAL**

---

**The RAD TERMINAL: a toolkit for connecting to others, digitally, over CB radio, and later over higher frequencies.**

**With this toolkit, you can maintain communications with others while: camping, living through a black out or other disaster, and in circumstances when the WWW and cell networks are down.**

**The RAD TERMINAL connects with: WiFi, MESH networks, local area networks, the WWW and with other rad terminals over radio. If a rad terminal needs to push data to the WWW, but cannot connect? - all they have to do is send the message to another RAD TERMINAL user.**

**COLLEGE KIDS can keep their parents informed in the event of an emergency. JOURNALISTS can keep getting the story OUT even under government repression. BUSINESSES can maintain logistics and supply chain coordination when the WWW and cell networks are down.**
